Introduction	1. Framework/main results			4. More cool results	
Cortical circuits exhibit intricate recurrent architectures that are remarkably similar across different brain areas. Such					
stereotyped structure suggests the existence of common					
computational principles. However, such principles have remained largely elusive. Here to better understand such prin-					
ciples we study the representations developed by artificial					
and biological recurrent neural networks.					
Question 1?					
Question 2?					
The model/data					
	2. More main results				
Details about model/data analysis			paper reference here et al. 2020		
	3. Homework results
